II. Definition and Definition Boundary of Highly Toxic Chemical

Definition: chemicals with severe acute toxicity, including synthetic chemical and its mixture and natural toxins, as well as the chemicals with acute toxicity that easily impair the public safety.

Definition boundary of severe acute toxicity: acute toxicity

category 1, namely, meeting one of the following conditions: experiment in rats, peroral $LD_{50} \leq 5\text{mg/kg}$, percutaneous $LD_{50} \leq 50\text{mg/kg}$, inhalation (4h) $LC_{50} \leq 100\text{ml/m}^3$ (gas) or 0.5mg/L (steam) or 0.05mg/L (dust, fog). The experimental data in rabbits can also be used as the experimental data of percutaneous LD_{50} .

III. Meaning of Columns in *Catalogue of Hazardous Chemicals*

(I) "S/N" means the serial number of the chemicals listed in the *Catalogue of Hazardous Chemicals*.

(II) "Trade name" means the names determined by *Nomenclature of Chemistry* (1980).

(III) "Alternate name" means other names except the "trade name", including common name, trivial name etc.,.

(IV) "CAS No." means the only register number of chemicals given by Chemical Abstract Service.

(V) "Remarks" means the specific note for highly toxic chemicals.

IV. Others

(I) *Catalogue of Hazardous Chemicals* is ranked by the Chinese pinyin of "trade name".

(II) Except for the listed items in the *Catalogue of Hazardous Chemicals*, inorganic salts include the anhydrous compound and the compound containing crystalline water.

(III) No.2828 is the generic item, except for the listed items in the *Catalogue of Hazardous Chemicals*, the chemicals that meet the conditions thereunder are the hazardous chemicals.

(IV) The items with no content description (except for compounds) in the *Catalogue of Hazardous Chemicals* refer to the industrial products of this item, or the chemicals whose purity is higher than industrial products. It refers to the original medicine when it is used as pesticide.

(V) The pesticide items in the *Catalogue of Hazardous Chemicals* are determined by combining the physical hazard, health hazard, environmental hazard and pesticide management situation.

Synthetic resins, paints, auxiliary materials, coatings and other products containing flammable solvents [closed cup flash point $\leq 60^{\circ}\text{C}$]

Notes:

- (1) Diluent type A refers to organic liquids that are compatible with organic peroxides with the boiling point of not less than 150°C . Diluent type A can be used to deactivate all organic peroxides.
- (2) Diluent type B refers to organic liquids that are compatible with organic peroxides with the boiling point of below 150°C but not less than 60°C and a flash point of not less than 5°C . Diluent type B can be used to deactivate all organic peroxides, but the boiling point must be at least 60°C higher than the self-accelerating decomposition temperature of the 50 kg package.
- (3) In Item 2828, liquids with a flash point of above 35°C but not exceeding 60°C may be considered as non-flammable liquids if they give negative results in the continuous burning test and will not be managed as flammable liquids.
